

# INTRODUCING THE HOBART LEGACY™ MIXER.

**Automatic Time Recall** remembers the last programmed time for each speed setting.

**Count-Up Mode** lets you stop the Legacy manually when you get the exact consistency you want.

**Patented soft start technology** lets you smoothly shift speeds.

The Legacy has created quite a stir—**Stir Speed**, that is, virtually eliminating product splash-out.

**Stir-On-Lift** lets the operator (using both hands) run Stir Speed while the bowl is being elevated. It will automatically Shift-on-the-Fly™ to the preselected speed when the bowl reaches the mixed position..

The **legacy of Hobart consistency** continues with familiar Hobart mixing speeds.

The Legacy's **Single Point Bowl Installation** makes it easy to install and remove the bowl.

Sleek design with rounded edges makes the Legacy **easier to clean**.

Now you can **Shift-on-the-Fly™** and change speeds while the mixer is running.

**Smart™ Timer** is so simple, yet so much more precise—down to the second.

To take the heavy lifting out of mixing, just press the **Power Bowl Lift** button.

**Simple controls** make it easy to operate.

The easy-to-clean **Splash Guard** protects the mixer from ingredient and product splash-out.

**Bowl Guard**. Easy to remove—without tools—for cleaning and sanitizing.

Patented **Hobart Quick Release™ Agitators** allow for easy attachment and removal.

The **Swing-Out Bowl** rotates away from the mixer to let operators add ingredients or take out product, then easily glides back into the spring-loaded bowl lock, which secures it automatically.

To make the Legacy even easier to work with, we've positioned **the bowl six inches higher**.
